

SUPPORTING YOUR FIRE CLAIMS

“

With years of experience, we specialise exclusively in fire and explosion investigations, offering in-depth knowledge of how fires begin, spread, and cause damage. Our team is equipped to tackle complex and high-value claims with the utmost accuracy.

”

ORIGIN AND CAUSE EXPERTS

THE CRUCIAL ROLE WE PLAY IN THE CLAIMS PROCESS

A fire or explosion can cause significant damage, financial loss, and legal implications. A thorough forensic investigation is essential before cleanup or recovery begins. Our team of highly skilled fire investigators and explosion specialists is prepared to respond immediately to assess and document the scene, preserving critical evidence that can determine cause, liability, and contributing factors.

We investigate fires and explosions in:

- Residential, commercial, and industrial properties
- Vehicles, machinery, mine sites and marine environments
- High-risk and complex fire scenes

Our Investigation Process

1. Scene Examination – A detailed, on-site forensic assessment.
2. Evidence Collection & Analysis – Identifying, preserving, and scientifically analysing fire patterns, burn damage, and testing for accelerants.
3. Cause & Origin Determination – Establishing whether the fire was accidental, intentional, or the result of mechanical or electrical failure.
4. Explosion Analysis – Evaluating blast effects, fuel sources, and ignition sequences in explosion incidents.
5. Expert Reporting & Testimony – Providing comprehensive reports for insurance claims, legal proceedings, and recovery efforts, with expert witness testimony available for court cases.
